experience ties the spic of the picture on the picture, or it may be a picture on the paper, or it may be a picture on the page. By their very nature, a piece of information from a page or a picture on a page, can have the same kind of meaning as a piece of information from a picture or a piece of information from a page. However, the meaning of these images will vary depending on the context in which they appear. For example, a picture on a page in a textbook might have a different meaning than a picture on a page in a magazine. The context in which the picture appears can greatly influence the meaning of the image. For instance, a picture of a landscape might have a different meaning when it appears in a geography textbook than when it appears in a travel magazine. The context in which the picture appears can also influence the way the picture is read. For example, a picture of a person might be interpreted differently when it appears in a magazine than when it appears in a newspaper. The context in which the picture appears can also influence the way the picture is understood. For example, a picture of a political event might be interpreted differently when it appears in a newspaper than when it appears in a political magazine. The context in which the picture appears can also influence the way the picture is remembered. For example, a picture of a historical event might be remembered differently when it appears in a history textbook than when it appears in a history magazine.
